ABSTRACT

In April of each year, North Carolina students in the 1st, 2nd, 3rd, 6th, and 9th grades participate in the state's Annual Testing Program. In 1984, the California Achievement Tests in reading, mathematics, language, and spelling were administered. This publication reports student performance for years 1981 through 1984. The body of the report is limited to a summary of student performance for the entire student population in the state and for the total student population in each of the eight educational regions. The level of student achievement for 1984 as well as the 1984 summary of student achievement for each of the 142 local education agencies is provided in the Appendix. Change in statewide student achievement between 1981 and 1984, for grades 3, 6, and 9, are highlighted. Since the performance of North Carolina students is being compared with a national population of students, a comparison of the state with the nation on other selected variables is also included: per capita income, average educational level, and per capita expenditures for public schools. Student Performance
North Carolina Annual Testing Program
Update From Spring Of 1981 To Spring Of 1984

Introduction

In April of each year, North Carolina students in the first, second, third, sixth, and ninth grades participate in the State's Annual Testing Program. This year, achievement tests in reading, mathematics, language, and spelling were administered. These tests are designed to obtain general measures of performance and to compare the performance of various groups of students. However, these tests also provide detailed information to help teachers, parents, and students obtain indicators of each student's learning strengths and difficulties. This publication reports student performance for years 1981 through 1984. Results for previous years may be obtained from earlier issues of this publication.

The body of this report is limited to a summary of student performance for the entire student population in the State and for the total student population in each of the eight educational regions. The level of student achievement for 1984 as well as the 1984 summary of student achievement for each of the 142 local education agencies in North Carolina is provided in the Appendix. Please note that student achievement reported in this publication, except where noted, is based on a school system's total student population, including most handicapped students. Since there exists uncertainty as to the degree of inclusion or exclusion of handicapped students in the national norm sample, care should be exercised when comparing these results with the the national norms. In fact it is likely that North Carolina includes more handicapped students in the Annual Testing Program than were included in the national norm sample. Therefore, student achievement is also reported by selected groups of handicapped students. These scores are part of the STATE Reports which are included in this publication. In addition, change in student achievement between 1981 and 1984, for grades three, six and nine, are highlighted. However, change in student achievement for grades one and two is currently not available since the norm-referenced California Achievement Tests were first administered at these grades this year. Achievement scores for grades one and two for previous years were estimates derived from the criterion-referenced Prescriptive Reading Inventory and Diagnostic Mathematics Inventory. Since the objective and item structure, test construction methodology, test administration procedures, and statistical procedures for obtaining student results differ among these two types of tests, the State Department of Public Instruction considers the trend comparison of these two types of scores inappropriate.

BEST COPY AVAILABLE

With the exception of spelling, student performance is reported in grade equivalent scores because this interpretive index has been used throughout the Nation, including North Carolina, and is more familiar to the general public than other derived scores. Percentile rank, another population interpretive score, and the scale score, a more reliable measure for technical and research purposes, may be obtained for various groups of students from the Division of Research, State Department of Public Instruction.

Please note that the publishers of the California Achievement Tests, CTB/McGraw-Hill, do not report grade equivalent scores for spelling at the ninth-grade level. CTB believes that the grade equivalent score is not an appropriate measure for spelling at this level because the average performance in spelling beyond the sixth-grade level typically increases very little and may even decline.

A grade equivalent score achieved by a particular group of students in North Carolina represents the school year and month (i.e., grade level) of the students in the national norming population who averaged the same score. For example, if a student at any grade level in North Carolina had an identical score on reading to that obtained by the average student in the Nation in the second month of the seventh grade, the grade equivalent score for the North Carolina student would be 7.2.

A percentile rank indicates the percentage of students in the national population who fall below the average student at a particular grade level in North Carolina. If the average student in the ninth grade in North Carolina had a percentile rank of 76 on the reading test, the student's score was equal to or better than 76 percent of the ninth-grade students in the Nation on the reading test.

Since the performance of North Carolina students is being compared with a national population of students, a comparison of the State with the Nation on selected important variables may contribute to a better understanding of the North Carolina results. Table 1 compares North Carolina with the Nation on per capita income, average educational level, and per capita expenditures for public schools.

During the past twenty years, North Carolina has remained one of the poorer states in terms of per capita income. While the real difference between North Carolina and the national per capita average income has increased ($649 in 1960 to $1,702 in 1980), the relative difference has decreased from 41 percent to 22 percent. A review of state and local expenditures for education reveals that North Carolina has also historically been below the national average. During this time, the education level of adults has increased greatly in North Carolina and the nation but at about the same rate. The number of handicapped students receiving services from public schools has also increased--particularly in the last decade. To bring North

BEST COPY AVAILABLE

Carolina's per pupil rate of expenditure for the public schools to the national rate (when it has been about twenty percent less during this time) would require $280 for each of some 1,108,960 students or just over 300 million dollars ($310,508,800).

With this background, the following tables present achievement results for the state and the eight educational regions. The Appendix contains summary information for each public school system.

Total	412,662	11,221	2,637	311	426,831

Summary of Student Performance

The major findings after the seventh year of the Annual Testing Program are as follows:

1. In the Spring of 1984, the typical (or average) student in North Carolina scored higher than the typical (or average) student in the national norm group in all subject areas in the first, second, third, sixth, and ninth grades. Relative to the norm, students score higher in language and mathematics than in reading.

2. Between the Spring of 1983 and the Spring of 1984, the average student in the third, sixth and ninth grades in North Carolina maintained or improved in performance in all areas. While direct growth comparisons for grades one and two are not available this year, the score distribution information, as summarized in item 3 below, strongly suggests that student achievement has improved for grades one and two as well.

3. Between the Spring of 1981 and the Spring of 1984, there has been a decrease in relative proportion of students having the lowest academic performance and an increase in proportion having the highest performance. Some evidence exists for a general improvement throughout the distribution of academic talent. In comparison with the national norm, North Carolina also has a greater proportion of students at or above the 96th percentile. While the national norm group has four percent at or above the 96th percentile, North Carolina has 13 percent at grade one, 14 percent at grade two, 11 at three, 9 at six, and 8 at nine.

4. Between the Spring of 1983 and the Spring of 1984 there has been an increase in the amount of homework assigned, as reported by students, at both the sixth and ninth grades. While in 1983, nearly one-half of the sixth-grade students reported that they were assigned less than three hours of homework; in 1984, approximately 41 percent of sixth graders said that they were assigned less than three hours. Similarly, for grade nine the percentages were 47 percent in 1983 as compared to 41 percent for 1984. As one would expect, there exists a positive correlation between amount of homework assigned and achievement scores.

5. The average student in each of the eight educational regions achieved higher than the average student in the norm group in all subject areas tested in grades one, two, three, six and nine as part of the Annual Testing Program. Since the initial Annual Testing in Spring, 1978, the region where scores were lowest (Region 4) has been where the greatest gain in achievement average has occurred. During this time, differences between all regions has been reduced (the range in total battery scores in 1983-84 has narrowed by approximately 35% since 1977-78).

STATE SUMMARY REPORTS

Reproduced on the following pages are the State Level Summary Reports which include student performance reported for each group of students as defined by the Student Information Questionnaire (e.g., ethnic origin, sex, parental education). While a number of trends in performance remain the same, such as the strong influence of parental education on achievement averages, of particular interest for 1984 is the increase in the number of sixth- and ninth-grade students reporting an increase in the amount of homework assigned (see Table 17). For additional trends, please examine the reports which follow, but keep in mind that while identified educational variables, such as parental education level, may positively correlate with student performance, one cannot infer that parental education causes higher student achievement.

APPENDIX

Test Results for Public School Systems And Federal Schools By Educational Regions

The following pages present, by region, each local school system's average achievement test scores for those grades involved in the North Carolina Annual Testing Program. If comparisons between a particular school system and the Nation, State, regions or other school systems are made, two factors should be kept in mind. These factors are:

1. National averages are based on samplings of students at various grade levels and there exists uncertainty as to the degree of inclusion or exclusion of handicapped students in these samples. For comparison and accountability purposes, the NCATP requires that most handicapped students, except Severely/Profoundly and Trainable Mentally Handicapped students, be tested. While this practice provides results for each school system based on similar student populations, these averages may not be the most appropriate ones for comparison to national figures. Because of the inability to exactly define the student population of the national norm sample, there exists no certain method of establishing an equivalent North Carolina student population on which to report student performance. Therefore, North Carolina State and Regional averages of student achievement are not only reported for total student population, but also for selected groups of handicapped students and for total population less "off-level" educable mentally handicapped students. Similar averages for each school system are provided in their summary reports. In addition, State, Regional, and School System averages based on total population less all handicapped students will be published in a separate report this fall.

2. With the 1983-1984 school year, Halifax and Polk County School Systems began participating in a three-year extended school year and extended school day evaluation study. Therefore, while student performance for these two school systems are reported in the Appendix, their results are NOT included in any state or regional averages. Analysis of State and Regional averages with the two school systems included produced no effect on the State or Region 8 figures, while the Region 3 averages for grade 6 Reading and for grade 9, except Spelling, were reduced by one grade equivalent month. A full special evaluation report will be published in the fall.

> Note: Since Halifax and Polk County students received approximately 20 additional instructional days prior to the time of testing, their student performance is based on eight months of instruction (i.e., national norm = 1.8). Student performance for all other school systems is based on seven months.

BEST COPY AVAILABLE

3. The composition of the student body in a particular school system in terms of socioeconomic data may vary significantly from other school systems, the educational regions, the State, and the Nation. Such variables as family income and educational level of parents should be taken into consideration when making comparisons with other school units.

State and regional data included in the body of this report should also be helpful in interpreting individual school system test results. Please contact the Research and Evaluation Consultant serving your region for assistance in interpreting local data.
